DESIGN: 1,5

Acoustic Research AR-M2

EAR IN Referenzklasse **1,0**
 Das Kopfhöremagazin 1/2018
 Preis/Leistung **sehr gut**

Price/Performance: very good

SOUND: 1+
CONFIGURATION: 1,8
HANDLING: 1,5

AR-H1:

"With its AR-H1, Acoustic Research has virtually ad hoc realized a reference class magnetostat. Respect."

AR-M2:

"Precious components, sophisticated design – the Acoustic Research AR-M2 is an exceptional DAP that sets standards in terms of sound."

Sound:

"In the light of all that technology, one might forget the reason behind all this – the music experience. But it is actually the other way round: As soon as you will listen to the music, you will forget about

the technical stuff. This combo opens on the spot such a wide and spatial panoramic sound catapulting you right into the middle of the music, that ambience and technology will fade away. This is cinema at its most. And it is true high end. Don't ask for tonality, resolution, dynamics or timing... these are just no issues for the combo. Acoustic Research has landed a really big hit here, that lives up to its well-respected name."
