Hirschmann Solutions presents new products at the M2M Summit

- **M2M Gateways and new, LTE-capable antennas for the Internet of Things at the Congress Center Düsseldorf**
- **Complete M2M portfolio also in new product catalogue**

Neckartenzlingen, 1 September 2015 – [Hirschmann Solutions](http://www.hirschmann-solutions.com), a leading provider of antenna and transceiver systems, will present its expanded M2M product portfolio at this year's M2M Summit on 8 and 9 September at the Congress Center Düsseldorf. The Hirschmann team will introduce trade fair visitors to new products such as the M2M Gateway module, which offers additional possibilities for communication and networking in fleet vehicles, heavy-duty vehicles and construction and agricultural machinery.

The company will also present two new antennas that are perfectly suited to the requirements of the market. For example, a new roof antenna covers several mobile communication standards and frequency ranges such as GPS/LTE-LB, GSM 1900 and LTE-HB/WLAN, and is therefore ideally suited to navigation, fleet management and traffic routing systems. The company's new cellular magnetic antenna for LTE, GSM and UMTS is a particularly robust antenna for the LTE 698 to 862 MHz (low) and 2305 to 2690 MHz (high) frequency ranges.
