OMEGA is now shipping the new Turbo-Timer 24

Douglasville, Georgia – December 5, 2012 – Omega Research and Development Technologies, Inc. is now shipping their new Turbo-Timer-24 which now gives the system the ability to operate on 12 or 24 volt vehicles. The need for a system like is almost a requirement for any turbo equipped vehicle as this system will dramatically increase the life span of a turbo application engine by assisting the engine oil and turbo to properly cool down after it was driven. The unit is also programmable for fixed run times from 30 seconds to 7 minutes and includes a shut off button and has two ignition outputs.

“With this new improvement, you can now connect the Turbo-Timer-24 directly to big Peterbilt, Volvo or Kenworth trucks with 24 volt electrical systems.” said Mike Thompson, Product Development & Marketing Manager, Omega Research and Development Technologies. “A lot of the owner/operators of these trucks depend on the truck staying out of the shop to make their money, cooling the turbo for a few minutes before the truck shuts down is a good way to get good performance and reliability out of any turbo equipped vehicle”

About Omega:

Omega Research & Development Technologies has been an innovative leader in the vehicle security industry for over 40 years. Since its founding in 1971, Omega's product line has diversified to include remote start modules and other vehicle accessory products. Omega's most recent product offerings include the exciting new technologies of telematics, wireless and databus integration.

With the vision of the founder, Kenneth Flick, guiding the company, auto security systems remain the central focus of Omega Research & Development Technologies. In 1995, Omega became the only company in the keyless entry arena with a technology designed to prevent crime due to unauthorized transmitter access to vehicle systems. The patented technology, **Unauthorized Transmitter Alert**, promises to revolutionize the industry. Consumers can now have instant knowledge of any unauthorized access to their keyless entry systems. Most of the product lines manufactured by Omega are equipped with Unauthorized Transmitter Alert technology.

Omega's mission, as it was over four decades ago, is to provide reliable, leading-edge security and automotive accessory products at a competitive price.
