

**S-Video Compatible Switch****Connect up to Four Video Components to Your TV**

The TERK S-video compatible Video Selector greatly expands the functionality of your home video system, by connecting up to four audio/video components and a set of powered speakers to your TV at one time. It's the ideal way to connect multiple components to your TV, and makes it easy for everyone in the family to enjoy their favorite movies, video games, camcorder tapes and other video sources.

Home Entertainment Made Easy

Although today's home entertainment systems can bring endless hours of viewing enjoyment to everyone in the family, they can also be difficult to deal with-especially if there aren't enough connections on your TV or receiver (if you have one) to accommodate all the program sources you wish to enjoy. In such cases, moving components around and disconnecting and reconnecting wires becomes a serious deterrent to fully utilizing and enjoying a home entertainment system. After all, not everyone in the household, especially children, may be capable of reconnecting components when they need to-and may even damage A/V equipment if they try.

S-Video Switching for Superb Picture Quality

Many TVs include an S-video input-a superior type of video connection than the standard coax or RF video inputs. S-video provides greatly improved clarity and resolution and a significant reduction of video artifacts. However, S-video-equipped TVs often include only one or two S-video inputs-which can limit your ability to get the most from your home entertainment system. TERK's Video Selector includes S-video switching on all inputs.

High-Quality Construction

The TERK Video Selector is constructed using high-quality components for maximum performance and reliability, including gold-plated connectors for best video and audio signal quality. The Video Selector includes non-skid feet to assure the unit stays in place when in use.

Easy Set Up and Installation

The Video Selector is easy to install in your system. Just connect all your source components. For added convenience, the Video Selector features a separate front panel jack for connecting powered multimedia speakers, and switches the audio from your components along with the video.

Flexible Installation Options
